

Action Items
North Pole Refinery Technical Project Team
February 16, 2011

1. Ms. Farris will follow up with Ms. Eltson regarding the status of the database queries.
2. Ms. Page will determine whether project monitoring wells are equipped with pressure transducers and report findings to Ms Farris and OASIS' Mr. Black.
3. Ms. Page will provide Ms. Farris with copies of the cross sectional displays of monitoring well information presented at the February 16th meeting.
4. Ms. Page will present to Ms. Farris and Dr. Barnes any information that may help the team determine the mole fraction of sulfolane in the LNAPL plume.
5. Ms. Page will provide Ms. Farris with a rough timeline of the development of the LNAPL protocol. Mr. Vitalie will provide the Chemistry Subgroup with the rough draft work plan for the development of the LNAPL protocol.
6. Ms. Farris will schedule a teleconference with Mr. Perkins in early March to discuss the status of the EPA's hazard ranking for the site.
7. Ms. Buss will attempt to contact personnel involved in the Zhu and Huntington Life Sciences studies to determine whether their findings can be adapted in such a way that they can be used to satisfy the criteria for the establishment of various PPRTVs for sulfolane.
8. Ms. Page will present to Ms. Farris information on the flow rates of the recovery wells before the coalescer was installed.
9. Dr. Barnes will inquire into the possibility of conducting studies on the attenuation parameters of sulfolane at the University of Alaska Fairbanks in order to address gaps in the conceptual site model.
10. Ms. Page will contact the developers of the in-home treatment system and ensure they take at least one measurement to determine whether the water softening component of the treatment system has any affect on the concentration of sulfolane in the water that moves through it.
11. Ms. Page will provide Ms. Farris with a copy of the home-owner's options regarding water treatment (s) and a copy of the settlement sheet.
12. Ms. Page will ensure that the contact information for DHSS and DEC personnel are removed from the in home treatment options document.
